

Profile

AI and Cybersecurity engineering student at ENSA Beni Mellal, looking to join **Orange Digital Summer** to contribute to innovative, secure and data-driven digital solutions. Hands-on with Python, machine learning, generative AI, RAG systems, SOC investigation, Linux security and full-stack prototyping. Comfortable turning ideas into working demos and clear technical documentation.

Technical Skills

AI / Data: supervised classification, Random Forest, data preprocessing, model evaluation, Jupyter, Scikit-learn.
Generative AI / RAG: LLMs, embeddings, Qdrant, FastEmbed, GroqCloud, LLaMA, prompt design, SSE streaming.
Cybersecurity: SOC analysis, Splunk, Windows/Linux logs, MITRE ATT&CK, IOC extraction, DFIR basics, IAM, RBAC, MFA.
Programming / Web: Python, FastAPI, Next.js, TypeScript, SQL, PostgreSQL, Redis, Docker, Git/GitHub, Linux.
Security Tools: Wireshark, Nmap, Burp Suite, Volatility, FTK Imager, Autopsy, Keycloak, OpenSSL.

- Selected Projects
- USMS Chatbot - Academic RAG Assistant

github.com/ALLAKORI/Chatbot-USMS

Generative AI / Full-stack / Security

 - Built an intelligent academic assistant for ENSA Beni Mellal, enabling natural-language access to FAQs, schedules and administrative information.
 - Designed a RAG architecture using FastAPI, Next.js, PostgreSQL, Redis, Qdrant, FastEmbed embeddings and GroqCloud / LLaMA response generation.
 - Added multilingual support, adaptive tone, SSE streaming, admin dashboard, JWT authentication, RBAC, rate limiting, PII masking, audit logs and backend tests.

Volt Typhoon Intrusion Investigation

allakori.github.io/writeups/tryhackme/volt-typhoon

SOC / DFIR / Threat Analysis

 - Investigated Splunk logs to reconstruct an APT-style intrusion across 9 MITRE ATT&CK phases and extract 10+ indicators.
 - Built a technical timeline connecting WMIC, PowerShell, certutil, netsh, wevtutil and credential-dumping activity to the attack path.

High-Pressure Pump Fault Prediction

github.com/ALLAKORI/Default-Pompe-Prediction

Machine Learning / Predictive Maintenance

 - Developed a predictive-maintenance prototype using pump sensor data such as voltage, power, speed, temperature, pressure and flow.
 - Trained a Random Forest model with Python, Pandas and Scikit-learn, then built a Tkinter interface to test risk predictions.

Experience

AI Intern - Predictive Maintenance

ONEE - Water Branch, Kasba Tadla

Aug. 2025

- Prepared and analyzed pump sensor data, then built a Python prototype combining Random Forest, data preparation and a testing interface.

Education

Engineering Degree – Cybersecurity and Artificial Intelligence, ENSA Beni Mellal

2024 - Present

DEUST – Mathematics, Computer Science and Physics, FST Fez

2022 - 2024 – With Honors

Scientific Baccalaureate – Series D, Lycee de Djagble, Togo

2022 – High Honors

Certifications and Achievements

IBM Introduction to Data Engineering | Cisco Ethical Hacker | Google Cybersecurity: Foundations and Play It Safe | TryHackMe Junior Penetration Tester Path | CSIA CTF 2026: 1st place with Team GHOSTSHELL

Languages

French: fluent | English: technical professional proficiency | Ewe: native
